Rock-McCarran 30% Design Presentation Workshop

For Immediate Release

Reno, Nev. The Truckee River Flood Management Authority (TRFMA) will hold an online Community Outreach Workshop on Wednesday, June 3, at 3:00 p.m. to present the 30% design for the Rock-McCarran Flood Protection Project. Led by J-U-B Engineers, the workshop will include project background, design updates, and time for questions and discussion. The Rock-McCarran project is located in the reach between the Rock and McCarran Boulevard bridges in Reno, NV and is part of the larger Truckee Meadows Flood Project, TRFMA's regional effort to reduce flood risk while restoring the river to a more natural state and supporting compatible public recreation along the Truckee River. This workshop will focus on the refinement of flood protection features such as levees, berms, floodplain terracing, and side channels

Additionally, recreational concepts for the park will be presented in greater detail, including conceptual renderings of trails, river access, and recreational areas designed to safely accommodate periodic flooding. The Rock-McCarran project design includes approximately 100-acres of restored natural open space and improved habitat, as well as a flood-compatible recreation area including flat fields for sports on the south side of the project area. Preliminary planning-level cost information estimates the base project at approximately $93 million and up to approximately $104 million with additional recreation enhancements.

Community Outreach Workshops provide in-depth information about TRFMA's mission, programs, and work to reduce flood risk along the Truckee River. These educational sessions include technical presentations on flood mitigation projects, infrastructure design, modeling, public safety, and coordination with regional partners.
